Produced by Impulse, Inc., Minneapolis, MN

The "place" to be for...

REAL MUSIC - Whatever you want to write in this easy-to-use program is REAL MUSIC ... with just about all the features and functions of regular music notation, PLUS

REAL INSTRUMENTS - Score your piece with the digitized sounds of actual musical instruments and write a jazz combo, some super synth-pop or a classical quartet - and then play it and hear...

REAL SOUND - You won't believe what you hear, when your new composition - scored for FULL percussion, a spectrum of brass and woodwind, and a band-ful of other instruments - starts to play! Real instrument sounds make REAL music - and only on Studio Session! Play your songs through your home stereo, or with the MacNifty Stereo System. Easy hook-ups give you FULL sound!

STUDIO SESSION comes with the one-of-a-kind "Player," which gives you imaginative tape-deck-like playback. You also get the "Editor," the very best music writing program ever written for the Mac. Six tracks of unbelievable options await your unbridled creativity.

Additional features include two disks-ful of digitized instrument sounds (over 90 instrument sounds available), along with a Phrase Library, to use in learning the use of the Editor. AND, for amazement and inspiration, you'll have over 20 "pre-recorded" songs to play on either the Player or the Editor. HEAR what you can do, once you start to write your own music with Studio Session. Also, print out complete scores of your music!

Here is Studio Session. The REAL music program, with three disks full of goodies.

Dear Studio Session Owner,

There have been a few minor revisions to *Studio Session*™ since the last printing of our manual. Some of these revisions were bug fixes and some were due to the introduction of new hardware from Apple. If you take a few minutes to read this errata sheet you can eliminate some potential problems or at least know how to work around them.

512K Old Rom Macs (not a 512K enhanced) - Owners of this type of machine please note that **the program disk will not boot up by itself on your machine.** We are sorry about this, but there are problems with shipping an old rom system to new machine buyers (they might not realize that booting an old System File with a new rom SE leads to a hard disk disaster). This means however that you must boot from another system disk (like *MacPaint*™ or *MacWrite*™) and then insert *Studio Session*™. However, if you want to build a bootable disk, be our guest; the disk is not protected. Just remember not to copy our System Folder over onto the new disk. You may have some space limitations so try to use the smallest System File you can find (or use the Font D/A mover to remove most of the DA's and fonts).

Publisher - Impulse, Inc. is no longer our publisher. Bogas Productions is now both author and publisher of *Studio Session*™. Impulse may continue to sell and support Studio Session, but we would prefer you to call us directly for marketing and technical questions.

No Finder - There is no longer a **Finder** shipped on our program disk. This means that you must boot from another system disk (one with a Finder) to copy or move files. This might be inconvenient but, because the HFS System File (and Finder) are so much larger then their pre-HFS counterparts, we just couldn't fit both.

Music & Sounds - We have two music & sound disks available: our *Heavy Metal Disk* and our *Country Music Disk*. They contain 6 and 8 songs respectively and about 30 sampled instruments. List price is $19.95 each. Call us for orders (or bug your dealer to get it in stock).

Warranty Cards - Please send in your warranty card!!! We only have a 50% return rate on these. You won't get an update notice if you don't send it in.
